## DETAILED ACTION

### ***Allowable Subject Matter***

1. Claims 1-13 and 15-16 are allowed.
2. The following is an examiner's statement of reasons for allowance:

None of the prior art teaches or suggests accurately detect a start and end time of digital data frames continuously received by a FM receiver in a communication system. More specifically, the system comprising a digital FM demodulator for receiving the frequency modulated signals, and for demodulating a dotting sequence signal, a word sync signal and a message word signal of each sub-frame included in the digital data frame; a dotting signal detector, which is provided with symbols of the signals demodulated by the digital FM demodulator, for detecting a dotting sequence signal of at least one sub-frame by determining whether the symbols corresponding to the dotting sequence signal are continuously detected more than a specific value that is shorter than the length of each dotting sequence signal; a word sync detector, which is provided with symbols of demodulated signals, for detecting the word sync signal of each sub-frame; a frame end counter for determining termination of the received digital data frame by increasing or decreasing a counting number whenever each symbol is detected reaches a predetermined number, and for resetting to a initial number if the word sync signal is detected prior to reaching the predetermined number; and a message processor means including a message accumulator that detects and stores at least one message word signal of the sub-frame from the demodulated signals, for

recovering the at least one message word signal from message word signals stored in the message word accumulator until receiving of the digital data frame is terminated.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
